DETAILED ACTION

1. Claims 3, 5, 7, 9, 11 are pending in the application.
2. Claims 1-2, 4, 6, 8, 10 have been canceled.

EXAMINER'S AMENDMENT

3. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Kenneth B. Leffler on January 9th, 2006.

- In order to avoid a 112 2nd, Paragraph rejection the claims have been amended as follows:
 - In Claim 11, line 1 **replace** "A method as claimed in claim 10" **with**
.....A method as claimed in claim 7.....

Allowable Subject Matter

4. Claims 3, 5, 7, 9, 11 and renumbered as claims 1-5 respectively are allowable over the prior art of record because the cited references do not contain the specified limitation of a receiver, for use in a telecommunications system in which transmissions are sent from a plurality of base stations, the receiver comprising:
receiver circuitry, for detecting transmissions from base stations;

a filter, for detecting a correlation between detected transmissions from base stations and a known code, the filter including a plurality of filter segments;

control circuitry, for switching the filter between a first synchronization mode, in which the filter is used divided into segments, when the receiver is first detecting transmissions from a base station to achieve synchronization therewith, and a second synchronization mode, in which the filter is used undivided, when the receiver is synchronized with one base station and is detecting transmissions from an alternative base station; and

a means for detecting a power of a correlation between detected transmissions from base stations and a known code,

wherein, in the first synchronization mode, the power of the correlations of the filter segments are detected and added together to form an output value, and, in the second synchronization mode, the correlations of the filter segments are added together and the power of the added correlations is detected, to form an output value.
